**ABSTRACT**

This report presents the results of the U.S. Geological Survey's analytical evaluation program for eight standard reference samples -- T-153 (trace constituents), M-146 (major constituents), N-57 (nutrient constituents), N-58 (nutrient constituents), P-30 (low ionic strength constituents), GWT-3 (ground-water trace constituents), GWM-3 (ground-water major constituents), and Hg-26 (mercury) -- which were distributed in April 1998 to 159 laboratories enrolled in the U.S. Geological Survey sponsored interlaboratory testing program. Analytical data that were received from 136 of the laboratories were evaluated with respect to overall laboratory performance and relative laboratory performance for each analyte in the eight reference samples. Results of these evaluations are presented in tabular form. Also presented are tables and graphs summarizing the analytical data provided by each laboratory for each analyte in the eight standard reference samples. The most probable value for each analyte was determined using nonparametric statistics.

**INTRODUCTION**

The U.S. Geological Survey (USGS) conducts an interlaboratory analytical evaluation program semiannually. This program provides a variety of standard reference samples (SRSSs) to accomplish quality assurance testing of laboratories and to provide an adequate supply of samples that contribute to quality control programs of participating laboratories. Natural-matrix reference materials are preferred for use in this interlaboratory evaluation program. A series of samples are prepared and distributed each spring and fall.

The program began in 1962 with a single sample containing major constituents that was prepared from distilled water and reagent grade chemicals. Twenty-three USGS laboratories participated in the first analytical evaluation program. Since that time, objectives of the program have been to:

- (1) evaluate and improve the performance of USGS and other participating laboratories;
- (2) provide a library of carefully prepared, homogeneous, stable reference materials for use in the quality control programs of laboratories;
- (3) identify analytical problem areas;
- (4) identify quality assurance needs with respect to environmental analyses and develop new reference materials to meet these needs; and
- (5) evaluate the accuracy and precision of analytical methods.

A total of 235 USGS and non-USGS laboratories are enrolled in the program, which can currently provide nine different types of SRSs:

1. Trace constituents.
2. Major constituents.
3. Nutrient constituents.
4. Low ionic strength constituents.
5. Mercury.
6. Whole water (water with suspended sediment).
7. Acid mine water constituents.
8. Ground-water trace constituents.
9. Ground-water major constituents.

Though this is not a laboratory certification program, participation in this continuing quality assurance program is mandatory for all laboratories providing water-quality data for USGS sponsored reports or storage in the USGS national data bases. Federal, State, Municipal, and University laboratories can participate even though they do not provide data to the USGS. SRS results can be used to alert participating laboratories of possible deficiencies in their analytical operations and provide reference materials for laboratory quality-control programs. Participating laboratories are identified only by a confidential laboratory code number.

A library of SRSs, from previous evaluations, is available. USGS offices and participating laboratories can request these SRSs for further testing, continuing quality assurance, and quality-control programs by contacting:

U.S. Geological Survey  
Branch of Quality Systems  
Denver Federal Center, Bldg. 53

Denver, Colorado 80225-0046  
(303) 236-1870

#### PURPOSE AND SCOPE

This report summarizes the analytical results submitted by 136 of the 159 laboratories that requested and were shipped SRSs for the July 1998 evaluation (table 1). Not all SRSs are requested or necessarily analyzed by all the laboratories; nor do all laboratories enrolled in the program participate in each evaluation. Analytical results for the following, which were mailed the week of April 7, 1998, are presented in this report.

T-153	Trace constituents	P-30	Low ionic strength constituents
M-146	Major constituents	GWT-3	Ground-water trace constituents
N-57	Nutrient constituents	GWM-3	Ground-water major constituents
N-58	Nutrient constituents	Hg-26	Mercury

The USGS requested that analytical results be returned by May 18, 1998 for evaluation and preparation of this report. Laboratories that are providing analytical services to USGS offices are requested to analyze the appropriate SRSs for the same analytes requested by the USGS offices. All laboratories are requested to include the analytical methods used to determine the concentration of each analyte. When analytical method information was provided, it has been included in tables 13 - 20.

## PREPARATION OF STANDARD REFERENCE SAMPLES

All of the SRSs used in this evaluation were prepared by USGS personnel located in Lakewood, Colorado, and were analyzed for analyte concentrations and physical property values prior to mailing. A library of these SRSs is maintained and can be requested by participating laboratories and USGS offices for use in their quality-control programs.

Trace constituents sample T-153 was prepared using tapwater collected from the Denver Federal Center in Lakewood, Colorado. The water was pumped through 0.45-, 0.2-, and 0.1-micron ( $\mu\text{m}$ ) filters, in series, into a 1200-liter (L) polypropylene drum. The water was continuously circulated and passed through a 0.1- $\mu\text{m}$  filter and ultraviolet sterilizer for 24 hours. Following this circulation, the water was acidified to pH 1.3 with nitric acid and chlorinated to 5 parts per million (ppm) free chlorine with sodium hypochlorite. The trace constituent concentrations were adjusted by adding reagent grade chemicals. The sample was circulated an additional 24 hours prior to bottling. During bottling, the sample was pumped through an ultraviolet sterilizer and a 0.1-  $\mu\text{m}$  filter. The polypropylene and fluorinated ethylene propylene bottles used were acid leached, deionized-water rinsed, and autoclave sterilized.

Major constituents sample M-146 was prepared using water collected from Clear Creek near Idaho Springs, Colorado. The water was pumped through 0.45- 0.2- and 0.1- $\mu\text{m}$  filters, in series, into a 1200-L polypropylene drum. The water was chlorinated to 5-ppm free chlorine with sodium hypochlorite, continuously circulated, and passed through a 0.1- $\mu\text{m}$  filter and ultraviolet sterilizer for 24 hours prior to bottling. The major constituent concentrations were adjusted by adding reagent grade chemicals during bottling; the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu\text{m}$  filter. The polypropylene bottles used were acid leached, deionized-water rinsed, and autoclave sterilized.

Nutrient constituents sample N-57 was prepared using deionized water. These samples were prepared the week prior to the mailing for this SRS evaluation. The water was pumped through 0.45-, 0.2-, and 0.1- $\mu\text{m}$  filters, in series, into a 25-L polypropylene drum and continuously circulated and passed through a 0.1- $\mu\text{m}$  filter for 24 hours. The desired nutrient concentrations were obtained by adding reagent-grade chemicals. The sample was continuously circulated for 24 hours prior to being bottled. During bottling, the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu\text{m}$  filter. The 30-milliliter (mL) glass vials used were new, amber, acid leached, deionized-water rinsed, and autoclave sterilized.

Nutrient constituents sample N-58 was prepared using water collected from the Fall River near Idaho Springs, Colorado. These samples were prepared the week prior to the mailing for this SRS evaluation. The water was pumped through 0.45- 0.2- and 0.1- $\mu\text{m}$  filters, in series, into a 200-L polypropylene drum and continuously circulated and passed through a 0.1- $\mu\text{m}$  filter for 24 hours. The desired nutrient concentrations were obtained by adding reagent-grade chemicals. The sample was continuously circulated for 24 hours prior to being bottled. During bottling, the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu\text{m}$  filter. The 250-mL polyethylene bottles used were new, amber, acid leached, deionized-water rinsed, and autoclave sterilized.

Low ionic strength constituents sample P-30 was prepared in a 400-L polypropylene drum using snowmelt collected from Genesee Park near Idaho Springs, Colorado. The water was pumped into the drum through 0.45- 0.2- and 0.1- $\mu\text{m}$  filters in series. Desired phosphate and fluoride concentrations were obtained by adding reagent-grade chemicals. Prior to bottling, the sample was continuously mixed for 24 hours while being circulated through a 0.1- $\mu\text{m}$  filter and an ultraviolet sterilizer. During bottling the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu\text{m}$  filter. The 500-mL polypropylene bottles used were acid leached, and deionized-water rinsed.

Ground-water major constituents sample GWM-3 was prepared using water collected from a monitoring well completed in alluvial deposits and located in Pueblo County, Colorado. The water was pumped through 0.45-, 0.2-, and 0.1- $\mu$ m filters, in series, into a 600-L polypropylene drum. The water was chlorinated to 5-ppm free chlorine with sodium hypochlorite. During bottling the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu$ m filter. The 500-mL polypropylene bottles used were acid leached, deionized-water rinsed, and autoclave sterilized.

Ground-water trace constituents sample GWT-3 was prepared using water collected from a monitoring well completed in alluvial deposits and located in Pueblo County, Colorado. The water was pumped through 0.45-, 0.2-, and 0.1- $\mu$ m filters, in series, into a 600-L polypropylene drum. The water was acidified to a pH of about 1.0 with nitric acid. During bottling the sample was pumped through an ultraviolet sterilizer and a 0.1- $\mu$ m filter. The 1000-mL fluorinated ethylene propylene bottles used were acid leached, deionized-water rinsed, and autoclave sterilized.

Mercury sample Hg-26 was prepared using water collected from the Fall River near Idaho Springs, Colorado. The sample was prepared in a 200-L polypropylene drum. The river water was pumped into this drum through 0.45-, 0.2-, and 0.1- $\mu$ m filters in series. The water was continuously circulated and passed through a 0.1- $\mu$ m filter and ultraviolet sterilizer for 48 hours. Nitric acid (5-percent, by volume) and dichromate compound (0.05-percent, by weight) were added to stabilize the sample. The desired mercury concentration was obtained by adding a mercury standard solution. Following an additional 24 hours of circulation, the sample was bottled. The 250-mL glass bottles and tetrafluoroethylene fluorocarbon resin caps used were new, acid leached, and deionized-water rinsed.

## LABORATORY ANALYSES

The participating laboratories were asked to determine constituents that are summarized in table 2. The number of analytes varied from 28 in T-153 (trace constituents) to 1 in Hg-26 (mercury).

**Table 2. -Constituents determined in standard reference samples distributed in April 1998**

(mg/L, milligrams per liter; µg/L, micrograms per liter; µS/cm, microsiemens per centimeter at 25 degrees Celsius)

Constituent or property	Units	T-153	M-146	N-57	N-58	P-30	GWT-3	GWM-3	Hg-26
Acidity	Acidity as CaCO <sub>3</sub>	mg/L			X				
Alk	Alkalinity as CaCO <sub>3</sub>	mg/L		X				X	
Ag	Silver	µg/L	X				X		
Al	Aluminum	µg/L	X				X		
As	Arsenic	µg/L	X				X		
B	Boron	µg/L	X	X		X	X		
Ba	Barium	µg/L	X				X		
Be	Beryllium	µg/L	X				X		
Ca	Calcium	mg/L	X	X		X	X	X

Cl	Chloride	mg/L		X		X		X	
Co	Cobalt	µg/L	X				X		
Cr	Chromium	µg/L	X				X		
Cu	Copper	µg/L	X				X		
DSRD	Dissolved solids	mg/L		X				X	
F	Fluoride	mg/L		X		X		X	
Fe	Iron	µg/L	X				X		
Hg	Mercury	µg/L							X
K	Potassium	mg/L	X	X		X	X	X	
Li	Lithium	µg/L	X				X		
Mg	Magnesium	mg/L	X	X		X	X	X	
Mn	Manganese	µg/L	X				X		
Mo	Molybdenum	µg/L	X				X		
Na	Sodium	mg/L	X	X		X	X	X	
NH <sub>3</sub> as N	Ammonia	mg/L			X X				
NH <sub>3</sub> +Org N as N	Ammonia + Organic N	mg/L			X X				
Ni	Nickel	µg/L	X					X	
NO <sub>3</sub> +NO <sub>2</sub> as N	Nitrate + Nitrite	mg/L			X X				
Pb	Lead	µg/L	X					X	
pH	unit		X			X			
PO <sub>4</sub> as P	Orthophosphate	mg/L			X X	X			
total P as P	Phosphorus	mg/L		X	X X			X	
Sb	Antimony	µg/L	X				X		
Se	Selenium	µg/L	X				X		
SiO <sub>2</sub>	Silica	mg/L	X	X			X	X	
SO <sub>4</sub>	Sulfate	mg/L		X		X		X	
Sp Cond	Specific conductance	µS/cm		X		X		X	
Sr	Strontium	µg/L	X	X			X		
Tl	Thallium	µg/L	X						
U	Uranium	µg/L	X						
V	Vanadium	µg/L	X	X			X		
Zn	Zinc	µg/L	X				X		

Laboratories were requested to identify the method used for each constituent according to table 3 analytical method codes.

**Table 3. Analytical method codes**

Code	Method
0	Other
1	Atomic absorption: direct, air
2	Atomic absorption: direct, nitrous oxide
3	Atomic absorption: graphite furnace
4	Inductively coupled plasma
5	Direct current plasma
6	Inductively coupled plasma/mass spectrometry
7	Ion chromatography
8	Atomic absorption: cold vapor
9	Atomic fluorescence
10	Atomic absorption: extraction [ <i>specify chelating agents</i> ]
11	Atomic absorption: hydride [ <i>specify reducing agent</i> ]
12	Flame emission
20	Titration: colorimetric [ <i>specify color reagent</i> ]
21	Titration: electrometric [ <i>specify reducing or oxidizing agent/color reagent</i> ]
22	Colorimetric: [ <i>specify reducing or oxidizing agent/color reagent</i> ]
40	Ion selective electrode
41	Electrometric [ <i>pH and specific conductance</i> ]
50	Gravimetric: [ <i>specify filtration, evaporation, and so forth</i> ]
51	Turbidimetric

Participating laboratories were also asked to identify the method used, such as those references listed next, to further define the methods.

## LABORATORY PERFORMANCE RATINGS

To facilitate laboratory intercomparison, laboratory performance ratings, based on the analyses reported for each SRS, are included in tables 4 through 20 in this report. For each SRS, averages of all the analyte ratings and the number of analyte values reported are given for each participating laboratory. In some cases, laboratory reported values in tables 4 - 20 might have been reformatted in terms of significant figures to meet publication criteria. For example, a reported value of 15 may have been changed to 15.0 or a value of 102.86 may have been changed to 102.9 in these tables. However, the actual reported values by all the laboratories were used to calculate the statistical results and performance ratings presented in the report.

Laboratory performance for each analyte is rated on a scale 4 to 0, based on the absolute Z-value, as listed below:

<u>Rating</u>	<u>Absolute Z-value</u>
4 (Excellent)	0.00 to 0.50
3 (Good)	0.51 to 1.00
2 (Satisfactory)	1.01 to 1.50
1 (Marginal)	1.51 to 2.00
0 (Unsatisfactory)	Greater than 2.00

Overall laboratory performance ratings greater than 2.4 are considered satisfactory. Ratings between 2.0 and 2.39 are considered marginal and that less than 2.0 are considered unsatisfactory. Ratings are based on the relative performance of laboratories on specific samples and should be reviewed and evaluated on a case-by-case basis for each laboratory considering such factors as methods used and data needs of specific USGS projects using the laboratory data.

## STATISTICAL PRESENTATION OF DATA

Data in this report have been evaluated using nonparametric statistics as described by Hoaglin and others (1983). This statistical approach is a resistant statistic because outliers do not influence the median, as is the mean in traditional statistics. Analytical data for each analyte are presented in tabular and graphical forms in tables 13 through 20. Tabulated data for each analyte include the laboratory code number; reported values; analytical method; most probable value (MPV); number of reported analyses, excluding less than values (N); data range; Z-value; and the F-pseudosigma. The Z-value is equivalent to the Z-score of traditional statistics, being the number of deviations the reported value is from the MPV. The F-pseudosigma is equivalent to the standard deviation ( $\sigma$ ) of traditional statistics when the data has a Gaussian distribution. If an analyte has a sufficient number of analyses by a given method, usually 7, the F-pseudosigma for that analytical method is reported in the block of data listed for each analyte.

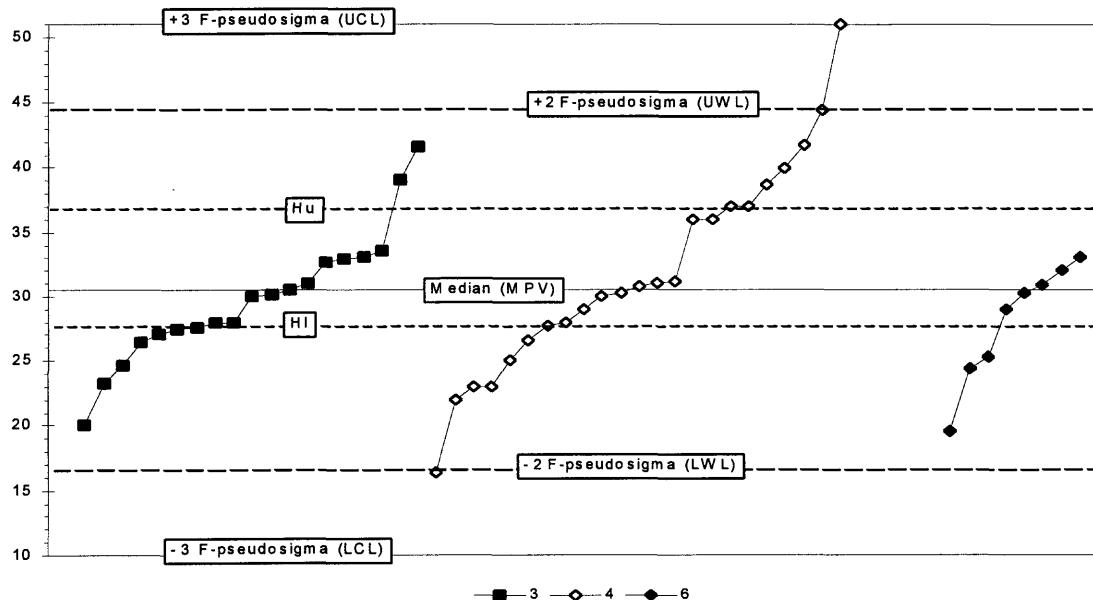

The median value is considered the MPV. The median (midpoint) divides the ordered data into halves and is designated the MPV. The hinges include the middle 50-percent of the data and are the mid-values of the upper and lower halves of the data. The hinges are similar to quartiles, but are not mathematically equivalent. The range of data between the upper hinge (Hu) and the lower hinge (Hl) and the hinge spread (H-spr), is used to calculate the F-pseudosigma, the laboratory performance rating, the upper warning level (UWL), lower warning level (LWL), the upper control level (UCL) and the lower control level (LCL). The F-pseudosigma is calculated by comparison of the H-spr value to the Gaussian distribution relation; 67.45 percent of the data "hinges" between plus and minus 1 $\sigma$ , resulting in a H-spr of  $2 \times 0.6745 = 1.349\sigma$ . This relation allows the calculation of the F-pseudosigma = (H-spr)/1.349. Laboratories reporting "less than" values are not performance rated unless their reported "less than" values are greater than two Z-values from the MPV.

The graphical plot of the reported data is shown in figure 1. The upper and lower boundaries of the graphical plots generally are +3 and -3 F-pseudosigma deviations from the median. Computer-program scaling constraints do not permit these boundaries to always be graphed at exactly these values as shown in the graphical plot. Reported values are grouped by analytical method in ascending order of value. Lines designate the MPV, Hu, HI, and the UWL and LWL at +2 and -2 F-pseudosigma, respectively. "Less than" values are not plotted.

In some cases, if the F-pseudosigma is less than five percent of the MPV, the rating criterion is five percent of the MPV. All rating criterion values are denoted in the statistical summary tables by double asterisks (\*\*).

The term "insufficient data" is included in some of the tables and is used when the number of analyses is less than 7 or the calculated F-pseudosigma is greater than the MPV.

In some cases the f-psuedosigma is equal to or greater than the MPV. This results in an MPV = insufficient data. An estimated MPV may be calculated from the available data for a single analytical method, this estimated concentration is denoted by MPV = Estimated. Estimated values are not used to rate laboratories.

NOTE: vertical scale is the concentration value of the individual analyte in appropriate units (see table 2). Horizontal scale is the laboratory reported values separated by method (different symbols) and plotted by increasing values. Numbers next to each symbol at the bottom of the figure are analytical method codes that are described in table 3.

**Figure 1.** -Statistical parameters shown on reported-data graphs in tables 13 - 20

Table 13. Statistical summary of reported data for standard reference sample T-153 (trace constituents)

Definition of analytical methods, abbreviations, and symbols

Analytical methods

0. Other/Not reported	=	atomic absorption: direct, air
1. AA: direct, air	=	atomic absorption: direct, nitrous oxide
2. AA: direct, N <sub>2</sub> O	=	atomic absorption: graphite furnace
3. AA: graphite furnace	=	inductively coupled plasma
4. ICP	=	direct current plasma
5. DCP	=	inductively coupled plasma / mass spectrometry
6. ICP/MS	=	ion chromatography
7. IC	=	atomic absorption: extraction (chelating agent[s] specified)
10. AA: extraction	=	atomic absorption: hydride (reducing agent specified)
11. AA: hydride	=	atomic absorption: flame emission
12. AA: flame emission	=	colorimetric (color reagent specified)
22. Color	=	

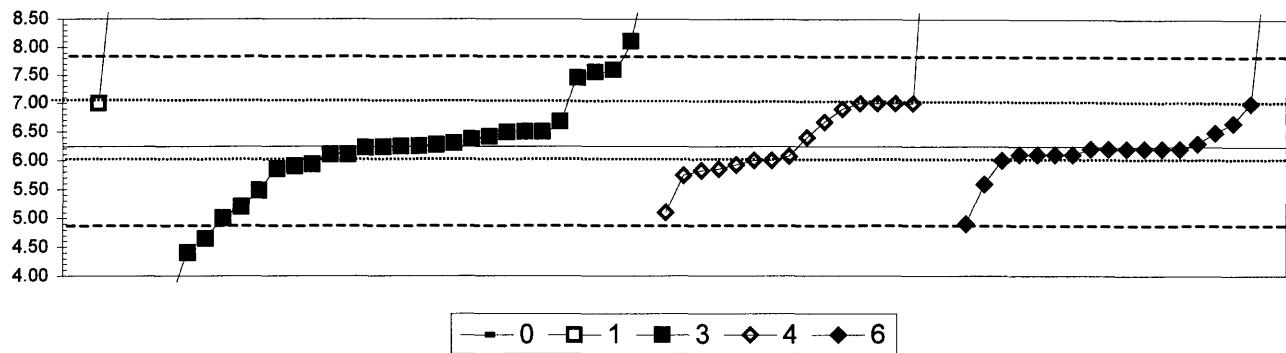

Abbreviations and symbols

N =	number of analyses--(excluding less than values)
MPV =	most probable value
F-pseudosigma =	nonparametric statistic deviation
Hu =	upper hinge value
HI =	lower hinge value
µg/L =	micrograms per liter
mg/L =	milligrams per liter
Lab =	laboratory code number
NR =	not rated, less than value reported or insufficient data
< =	less than

<u>Constituent</u>	<u>page</u>	<u>Constituent</u>	<u>page</u>

---

**Analytical methods**

0. Other/Not reported	=	
4. ICP	=	inductively coupled plasma
5. DCP	=	direct coupled plasma
7. IC	=	ion chromatography
20. Titrate: color	=	titration: colorimetric (color reagent specified)
21. Titrate: electro	=	titration: electrometric
22. Color	=	colorimetric (color reagent specified)
40. Ion electrode	=	ion selective electrode

---

**Abbreviations and symbols**

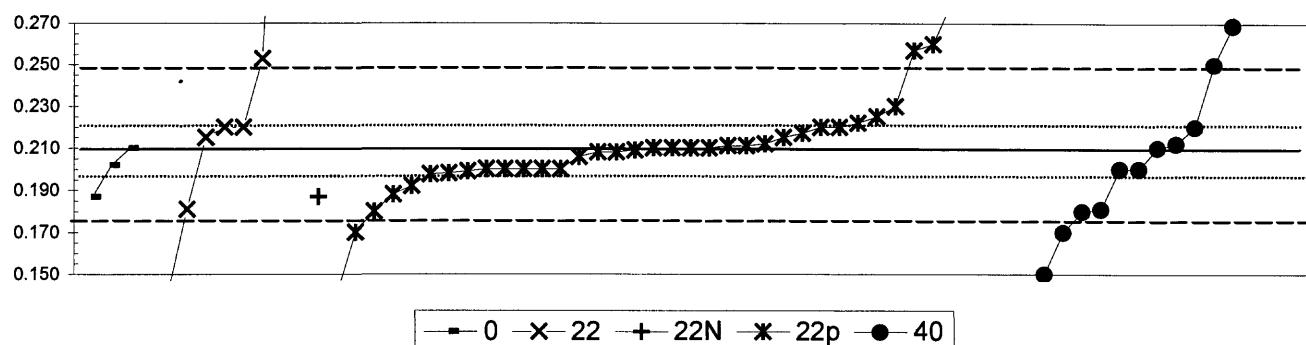

N =	number of analyses--(excluding less than values)
MPV =	most probable value
F-pseudosigma =	nonparametric statistic deviation
Hu =	upper hinge value
Hi =	lower hinge value
mg/L =	milligrams per liter
Lab =	laboratory code number
NR =	not rated, less than value reported or insufficient data
< =	less than

---

<b>Constituent</b>		<b>page</b>
NH <sub>3</sub> as N	Ammonia as nitrogen	94
NH <sub>3</sub> +Org N as N	Ammonia plus organic nitrogen as nitrogen	95
NO <sub>3</sub> +NO <sub>2</sub> as N	Nitrate plus nitrite as nitrogen	96
Total P as P	Total Phosphorus as phosphorus	97
PO <sub>4</sub> as P	Orthophosphate as phosphorus	98

Definition of analytical methods, abbreviations, and symbols		
<u>Analytical methods</u>		
0. Other/Not reported		
4. ICP	= inductively coupled plasma	
5. DCP	= direct coupled plasma	
7. IC	= ion chromatography	
20. Titrate: color	= titration: colorimetric (color reagent specified)	
21. Titrate: electro	= titration: electrometric	
22. Color:	= colorimetric (color reagent specified)	
40. Ion electrode	= ion selective electrode	
<u>Abbreviations and symbols</u>		
N =	number of analyses--(excluding less than values)	
MPV =	most probable value	
F-pseudosigma =	nonparametric statistic deviation	
Hu =	upper hinge value	
HI =	lower hinge value	
mg/L =	milligrams per liter	
Lab =	laboratory code number	
NR =	not rated, less than value reported or insufficient data	
< =	less than	
<u>Constituent</u>		
NH <sub>3</sub> as N	Ammonia as nitrogen	<u>page</u>
NH <sub>3</sub> +Org N as N	Ammonia plus organic nitrogen as nitrogen	100
NO <sub>3</sub> +NO <sub>2</sub> as N	Nitrate plus nitrite as nitrogen	101
Total P as P	Total Phosphorus as phosphorus	102
PO <sub>4</sub> as P	Orthophosphate as phosphorus	103
		104

Table 17. Statistical summary of reported data for standard reference sample P-30 (low ionic strength constituents)

<u>Definition of analytical methods, abbreviations, and symbols</u>		
<u>Analytical methods</u>		
0. Other/Not reported		
1. AA: direct, air	= atomic absorption: direct, air	
2. AA: direct, N <sub>2</sub> O	= atomic absorption: direct, nitrous oxide	
3. AA: graphite furnace	= atomic absorption: graphite furnace	
4. ICP	= inductively coupled plasma	
5. DCP	= direct current plasma	
6. ICP/MS	= inductively coupled plasma / mass spectrometry	
7. IC	= ion chromatography	
12. Flame emission	= flame emission	
20. Titrate: color	= titration: colorimetric (color reagent specified)	
21. Titrate: electro	= titration: electrometric	
22. Color:	= colorimetric (color reagent specified)	
40. Ion electrode	= ion selective electrode	
41. Electro	= electrometric: (type meter specified)	
50. Gravimetric	= gravimetric: (precipitate specified)	
51. Turbidimetric	= turbidimetric: (precipitate specified)	
<u>Abbreviations and symbols</u>		
N =	number of analyses--(excluding less than values)	
MPV =	most probable value	
F-pseudosigma =	nonparametric statistic deviation	
Hu =	upper hinge value	
Hi =	lower hinge value	
mg/L =	milligrams per liter	
µS/cm =	microsiemens per centimeter at 25° C	
Lab =	laboratory code number	
NR =	not rated, less than value reported or insufficient data	
< =	less than	
<u>Constituent</u>

Table 21. Most probable values for constituents and properties in standard reference samples distributed in April 1998  
 (MPV, most probable value; N, number of samples; µg/L, microgram per liter; mg/L, milligram per liter; µS/cm, microsiemens per centimeter at 25 degrees Celsius.)

### T-153 (trace constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
Ag	6.24 µg/L	0.74	68	Mg	8.72 mg/L	0.30	95
Al	35.0 µg/L	5.1	55	Mn	74.5 µg/L	3.3	93
As	0.50 µg/L	0.24	21	Mo	154 µg/L	8	58
B	99.4 µg/L	7.4	50	Na	28.7 mg/L	1.0	92
Ba	184 µg/L	8	78	Ni	32.2 µg/L	2.1	84
Be	insuff data			Pb	46.2 µg/L	3.0	88
Ca	27.5 mg/L	1.0	93	Sb	25.7 µg/L	2.5	55
Cd	16.0 µg/L	1.1	91	Se	9.00 µg/L	1.33	68
Co	insuff data			SiO <sub>2</sub>	5.79 mg/L	0.22	52
Cr	14.9 µg/L	1.1	78	Sr	311 µg/L	13	49
Cu	24.0 µg/L	1.5	88	Tl	20.4 µg/L	1.9	48
Fe	75.0 µg/L	5.9	84	U	6.9 µg/L	0.4	13
K	1.60 mg/L	0.11	80	V	19.0 µg/L	1.0	50
Li	53.4 µg/L	3.6	33	Zn	72.6 µg/L	5.1	87

### M-146 (major constituents)

Analyte	MPV	F-pseudosigma	N	Analyte	MPV	F-pseudosigma	N
alkalinity as CaCO <sub>3</sub>	57.6 mg/L	2.5	93	Na	45.0 mg/L	1.8	94
B	13.9 µg/L	2.3	30	total P as P	insuff data		
Ca	26.3 mg/L	1.1	96	pH	8.08 units	0.19	95
Cl	46.1 mg/L	3.8	93	SiO <sub>2</sub>	9.36 mg/L	0.5	65
DSRD	242 mg/L	12	64	SO <sub>4</sub>	69.0 mg/L	3.3	89
